Exam: Automating Cisco Security Solutions (SAUTO)

Duration: 2 Hours

Q1.

Which description of synchronous calls to an API is true?

    A. They can be used only within single-threaded processes.
    B. They pause execution and wait for the response.
    C. They always successfully return within a fixed time.
    D. They can be used only for small requests.
Correct Answer

Answer: B

Q2.

Refer to the exhibit.

```
import requests

headers = {
   'Authorization': 'Bearer ' + investigate_api_key
}

domains=["cisco.com", "google.com", "xreddfr.df"]

investigate_url= "https://investigate.api.umbrella.com/domains/categorization/"
values = str(json.dumps(domains))
response = requests.post(investigate_url, data=values, headers=headers)
```

What does the response from the API contain when this code is executed?

    A. error message and status code of 403
    B. newly created domains in Cisco Umbrella Investigate
    C. updated domains in Cisco Umbrella Investigate
    D. status and security details for the domains
Correct Answer

Answer: D

Q3.

Refer to the exhibit.

```
import requests

URL = 'https://sma.cisco.com:6080/sma/api/v2.0/quarantine/messages/details?quarantineType=spam&device_type=esa'
HEADERS = {'Authorization': 'Basic Y2h1cGFLYWJSQSZe'}

response = requests.get(URL, headers=HEADERS)
```

A security engineer attempts to query the Cisco Security Management appliance to retrieve details of a specific message.

What must be added to the script to achieve the desired result?

A. Add message ID information to the URL string as a URI.
B. Run the script and parse through the returned data to find the desired message.
C. Add message ID information to the URL string as a parameter.
D. Add message ID information to the headers.

Correct Answer

Answer: C

Q4.

Refer to the exhibit.

```
import json
import requests

USER = "admin"
PASS = "C1sco12345"
TENAT_ID = "132"
BASE_URL = "https://198.18.128.136"
CREDENTIALS = {'password': PASS, 'username': USER}

session = requests.Session()
session.post(BASE_URL+"/token/v2/authenticate", data= CREDENTIALS, verify=False)

QUERY_URL=BASE_URL+"/sw-reporting/rest/v2/tenants/{0}/queries".format(TENAT_ID)

flow_data ={
  "searchName": "Flows API Search on 6/29/2019",
  "startDateTime": "2019-06-29T00:00:01Z",
  "endDateTime": "2019-06-29T23:59:59Z"
}

session.post(QUERY_URL, json=flow_data, verify=False)
```

A network operator must generate a daily flow report and learn how to act on or manipulate returned dat

a. When the operator runs the script, it returns an enormous amount of information.

Which two actions enable the operator to limit returned data? (Choose two.)

A. Add recordLimit. followed by an integer (key:value) to the flow_data.
B. Add a for loop at the end of the script, and print each key value pair separately.
C. Add flowLimit, followed by an integer (key:value) to the flow_data.
D. Change the startDateTime and endDateTime values to include smaller time intervals.
E. Change the startDate and endDate values to include smaller date intervals.

Correct Answer

Answer: A, B
